

PCC STRUCTURALS CASE STUDY

PCC Recovers \$1.27M Through Proactive Savings

CUSTOMER

Precision Castparts Corp (PCC) Structural, a division of PCC, is a national aerospace manufacturer operating over 100 manufacturing locations across the United States, with a heavy presence in Southern California, the Pacific Northwest and Ohio.

Each facility operates autonomously, maintaining its own P&L and makes independent logistics decisions.

THE CHALLENGE

PCC supplies critical components to major OEMs, where late shipments can trigger fines reaching into millions of dollars and risk shutting down customer production lines.

Before Jarrett, freight management was decentralized. Some sites used a single carrier, others relied on national brokers and some awarded loads to whichever provider answered first.

Additional challenges included:

- Slow freight coordination due to gaps in communication.
- High exposure to customer fines from late delivery of critical components.
- Risk of line-down situations caused by disruptions in the flow of parts between facilities.
- Limited internal bandwidth, with employees holding a multitude of responsibilities throughout the company.

"We can plan accordingly knowing that we will secure the type of transportation we need in a timely manner, and we can provide timelines to upper management due to Jarrett's real time info regarding all freight."

Crystal Chaney, Outside Processing Team Lead
PCC Structural Inc

THE SOLUTION

Jarrett deployed a high-touch logistics support model tailored to PCC's production cadence and decentralized culture.

- Real-time planning through continuous in-transit updates allow more efficient production timelines and more visibility for leadership.
- Jarrett took over PCC's expedited freight, keeping critical shipments on schedule and avoiding late fees.
- Jarrett's support enabled faster turnaround times to keep production on track and avoid millions in fines.
- Jarrett's deep process integration allowed seamless communication and execution across all sites and modes to mitigate line-down events.

"Jarrett has been able to adapt to our every need whether it's last minute, more than normal freight or changes from LTL to expedite. They always accommodate swiftly," said Crystal Chaney, Outside Processing (OSP) Team Lead at PCC Structural.

VALUE DELIVERED

Over \$1.27 million in proactive savings: Jarrett delivered savings through carrier changes, mode shifts, audit findings, pipeline savings and accessorial corrections.

10+ hours saved weekly: Jarrett eliminated the need for site teams to call multiple carriers daily, saving over 10 hours weekly and reducing missed deliveries.

Supplier of the Year: The manufacturer awarded Jarrett its Vendor of the Year honor, marking the first time a non-raw material provider earned the distinction."

"Having Jarrett schedule our shipments has saved so much time and freed us up to focus on other aspects of our job. No more calling numerous freight carriers to see who's available or if they can accommodate our needs for the day," said Chaney.
